

K. VENKATA DHANUSH

Python Developer | Linux Systems | SQL Developer (Fresher)

Hyderabad, India | +91 9392856298 | Kanasanidhanush7@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Entry-level Python Developer with hands-on practice in Linux system administration and SQL database management. Built a Python-based Linux Security Log Analyzer to detect and report suspicious SSH activity, and designed a multi-VM Linux homelab across Ubuntu and RHEL. Proficient in MySQL CRUD operations, joins, aggregate functions and views. Seeking an entry-level Python Developer, Linux Systems or SQL Developer role.

TECHNICAL SKILLS

Python: Core Python, OOP, Data Structures, Exception Handling, File Handling, Regular Expressions, argparse

Linux & Systems Administration: Ubuntu, RHEL 7/8/9, CentOS, User/Group Management, File Permissions & ACLs, systemctl, YUM/DNF/APT, LVM

SQL / Databases: MySQL, CRUD Operations, Joins, Aggregate Functions, Views, Database Design

Networking: TCP/IP, DNS, DHCP, SSH, NFS, Samba

Scripting & Automation: Bash Scripting for System Tasks and Automation

Tools & Version Control: Git, GitHub, Command Line

Operating Systems: Ubuntu, RHEL, CentOS, Windows

PROJECTS

Linux Security Log Analyzer — Python, Linux, Regex, CLI

- Built a Python CLI tool that parses Linux SSH authentication logs to detect failed login attempts, suspicious IP addresses and security events.
- Used regular expressions and modular Python functions to extract IP addresses, usernames and timestamps from raw authentication logs.
- Implemented threshold-based suspicious-IP scoring (5+ failed attempts) to flag likely brute-force activity.
- Generated structured security reports summarizing failed attempts, IP attack frequency and flagged threats.

Linux Administration Homelab — Ubuntu, RHEL, Bash, SSH, NFS, Samba, LVM

- Designed and deployed a multi-VM lab environment across Ubuntu and RHEL to practice real-world Linux system administration.
- Configured SSH remote access, NFS and Samba file sharing, and LVM-based storage management across multiple nodes.
- Implemented user/group management, file permissions and ACLs to enforce secure, controlled system access.
- Automated routine administrative and troubleshooting tasks using Bash scripting.
- Managed package installation and system updates across YUM/DNF and APT-based distributions.

EDUCATION

M.Sc. Computer Science

2026

Vikas PG College | Krishna University

B.Sc. Computer Science

2024

Vikas Degree College | Krishna University | CGPA: 7.0 / 10
